Picasa and Picasa Web Albums Help

Getting Started Guide

Welcome!

In this guide, you'll learn how to organize and edit your photos with the Picasa software, and how to upload and share them using Picasa Web Albums.

The Picasa Software

The Picasa software lets you organize, edit, and upload your photos in quick, easy steps. Download Picasa at <http://picasa.google.com>

- Two things to know
- Add your photos
- Organize your photos
- Edit your photos
- Share your photos
- Discover more features

Picasa Web Albums

Looking for a simple way to get photos from your camera and computer on the web? Picasa Web Album provides one GB of free storage that makes sharing your photos a snap. Visit <http://picasaweb.google.com>

- Sign up
- Upload photos to Picasa Web Albums
- View your albums
- Share your albums
- Add Favorites
- Discover more features

Two things to know

The Picasa software provides a simple way to view, edit, and organize the photos on your computer. As you get started, there are two things you should always remember:

- **Picasa does not store the photos on your computer.**
When you open Picasa, it simply looks at the folders on your computer and displays the photos it finds. It displays the file types that you tell it to find, in the folders that you tell it to search.
- **Your original photos are always preserved.**
When using editing tools in Picasa, your original files are never touched. The photo edits you make are only viewable in Picasa until you decide to save your changes. Even then, Picasa creates a new version of the photo with your edits applied, leaving the original file totally preserved.

Add your photos

Use Picasa to view photos already on your computer, or to import photos from your camera.

Add photos already on your computer

Once you've downloaded and installed Picasa, you have total control over the photos that Picasa displays. Picasa shows you the photo and video file types that you tell it to find, in the folders that you tell it to search.

Control the folders that display	Control the file types that display
Click Tools > Folder Manager to control which folders are displayed:	Click Tools > Options (PC) or Picasa > Preferences (Mac) to control which file types are displayed

Import new photos

Of course, not all your photos reside on your computer. You can import photos into Picasa from many sources, including cameras, CDs, memory cards, scanners, webcams, and more. Photos you import are saved on your computer and displayed automatically in Picasa.

Organize your photos

The folder list on the left is the hub for Picasa organization. By scrolling through this list, you can access all photos displayed by Picasa. To understand Picasa organization, you need to understand the following three collections:

■ Folders

Folders in Picasa represent the folders on your computer. You control the folders that are scanned and displayed by Picasa. Changes you make to folders in Picasa affect the corresponding folders on your computer's hard drive. For example, if you delete a photo in a Picasa folder, that photo is also deleted from the computer.

■ Albums

Unlike folders, albums exist only in Picasa. Albums allow you to create virtual groups of photos taken from multiple folders on your computer. Albums display those photos without actually moving the photo -- it's like a playlist for photos. When you delete or move photos from an album, the original files remain in their original folders on your computer.

■ People

In this collection, you can organize your photos by what frequently matters most -- the people in them. Picasa uses facial recognition technology to find and group similar faces together across your entire collection of photos. By adding name tags to these groups of faces, new people albums are created. These people albums are just like the albums above: when you move or delete faces, the original files stay put.

Edit your photos

Picasa provides a range of one-click fixes to help you improve almost any photo, adjust its color and lighting, and add effects like black and white or sepia toning. Double-click a photo and use the three editing tabs on the left.

Basic Fixes	Tuning	Effects
<p>Make simple edits -- such as cropping, straightening, removing redeye, retouching blemishes, or adding text -- to your photos. Or click I'm Feeling Lucky to try Picasa's all-in-one lighting and contrast fix. Learn more about Basic Fixes</p>	<p>Use the sliders to adjust the color and lighting aspects of your photo to produce a more visually enhanced image. Learn more about Tuning</p>	<p>Choose from 12 effects to make your photos more interesting: Sharpen, convert to sepia or black and white, warm the photo, apply tint, saturate the colors, and more. Learn more about Effects</p>

Don't worry -- Picasa always preserves your original photo. The photo edits you make are only viewable in Picasa until you decide to save your changes. Even then, Picasa creates a new version of the photo with your edits applied, leaving the original totally preserved.

Share your photos

Your photos take on more meaning when you share them with friends and family. Here are two ways to quick share your photos:

Upload photos to the web

Use the **Upload** button in Picasa to upload all selected photos to Picasa Web Albums. Don't feel like picking through your photos? The

Share button  uploads an entire folder or album, and sends email invitations to your friends and family.

Email photos

Click the **Email** button in Picasa to quickly send all selected photos to friends and family, using the email provider of your choice. Keep in mind that email doesn't accommodate a large number of photos, so if you want to share a lot of photos, consider uploading them to Picasa Web Albums, where you can take advantage of the free one GB of storage that's available.

Discover more features

If you've read this far, you're familiar with the basics of Picasa. As you become a power user, here are some of the features for you to explore:

Resize photos: One of the most popular -- and most hidden -- features of Picasa is the ability to resize photos. Use the **Export** button to quickly resize your photos.

Sync to Web: When you enable **Sync to Web** in Picasa for a folder or album, edits made to your photos in Picasa are reflected immediately in the corresponding album in Picasa Web Albums.

Make a collage: Make a collage and share it with your friends and family. Experiment with six different types of collage, and maintain total control over your collage content and layout.

Add captions: Adding captions can help tell the rest of the story. While editing a photo, click the text below that says 'Make a caption!'. Captions are displayed in Picasa, Picasa Web Albums, and other IPTC compatible programs.

Use Movie Maker: Combine your photos, videos, and music into a movie and upload it directly to YouTube. You can also trim existing video files.

Map photos: Use the **Maps** tab in Picasa to embed latitude and longitude information into the EXIF data of your photo file. This geographic data accompanies your photo when you upload it to Picasa Web Albums.

Print photos: Use the **Shop** button to order prints from our online print partners or use the **Print** button to print your photos at home.

Add tags: Tags are like keywords. By applying single or multiple-word tags in Picasa, you can quickly search and locate photos. The Tags tab offers quick tags, tag counts and the ability to manage your tags.

Upload to Blogger: Use the BlogThis! button to post photos directly from Picasa to Blogger.

Back up your collection: Protect those precious memories. Use Picasa to back up your photo collection to either an alternate drive or to CD/DVD.

Sign up

Looking for a simple way to get photos from your camera and computer on the web? Picasa Web Albums provides 1 GB of free storage that makes sharing your photos quick and easy. To start using Picasa Web Albums, just sign in with your Google Account at <http://picasaweb.google.com>. (If you use Gmail, you already have an account.)

Don't have an account? Create one in seconds.

After you've created your account, get started by setting your Picasa Web Albums profile photo. It's a good way to introduce yourself to the people that view your photos: this information will display on your public gallery, in each of your albums, and next to comments that you leave.

Upload your photos

No matter where your photos are located -- Mac, PC, mobile, iPhone, etc. -- you can easily upload them into Picasa Web Albums. Upload photos from Picasa or directly on Picasa Web Albums:

- **Upload from the Picasa software**

Use the **Upload** button to upload all selected photos to Picasa Web Albums. Don't feel like picking through your photos? The **Share** button uploads an entire folder or album, and sends email invitations to your friends and family.

- **Upload on Picasa Web Albums**

Click the **Upload** button at <http://picasaweb.google.com> to upload photos from your hard drive to the web.

Let friends and family contribute photos

You can also let other people add photos to your albums. Contributors can add captions to, edit, rotate, or even delete the photos that they've uploaded to your album. Learn more about adding and managing contributors.

When you open Picasa Web Albums at <https://picasaweb.google.com>, you're taken to your homepage, which will show you photos that are interesting to you. Here's a quick tour:

- **My Recent Albums:** To see more than the latest albums you've uploaded, you can expand the list by clicking **Show More Albums**. The **View All Albums** link will take you to a gallery of all your albums.
- **Recent Activity:** Keep up with the most recently uploaded public albums from people you follow and any photos that have been shared with you.
- **Featured Photos:** Here is a sampling of high quality photos from across the Picasa Community. Click an individual photo to view it full size. Photos that have been featured will be badged with the Picasa Web Albums logo.

Share your albums

Click the **Share** button to post photos to your Google+ stream or to send an email to a friend, inviting them to look through your Picasa Web album. Learn more about sharing in Picasa Web Albums.

Control your album visibility

Set your album visibility as public or as private as you'd like.

- **Public**
Anyone on the web can view public albums. Public albums can be found on your public gallery, in web search results, on your Google profile, and in Google+.
- **Limited, anyone with the link**
These albums are visible to anyone with the link. They're technically visible to anyone, but they include a unique authorization key in the web address; the key is a combination of letters and numbers that make the address difficult to guess.
- **Limited**
Limited albums are visible only to the people you specify, and those people must sign in to their Google Account to view your photos. Users without a Google Account will be prompted to create one. **Google+ users:** The people you share with have permission to reshare your album. Within Google+, they'll also be able to see who else you've shared with.
- **Only you**
The highest level of privacy, these albums are visible only to you. Changing an album to 'Only you' will wipe everyone off the album's 'Shared with' list.

Get feedback!

So you've shared your vacation photos with your friends and family...now what? How many people view them? Which ones did they like? Here are a few ways get feedback:

- A view count shows up at the bottom-right corner when you're viewing your photo or video to let you see how many people viewed that photo or video.
- See how many people clicked the **Like** link below a photo or video.
- The old stand-by -- comments allow your visitors to tell you what they really think.

Add Favorites

Picasa Web Albums is as social as you want it to be. Add to the list of people you're following to receive updates when they add new photos to their public galleries. Learn more about adding and managing the people you follow.

Of course, this also means that other people can follow you -- these are your Followers. Embrace their curiosity by uploading more public photos or feel free to block them.

People in my photos | People I'm Following | Suggested People to Follow | **Followers (58)**

Discover more features

As you become a power user, here are a slew of other features for you to explore:

- **Add captions:** Click **Edit > Captions** to add captions to all photos in an album from the same screen.
- **Add tags:** Tags are like keywords. By labeling your photos, you can quickly search and locate them on Picasa Web Albums.
- **Map your photos:** When you upload photos, geographical information in the photo's EXIF data is used to map your photos. You can also drag-and-drop them on the map in Picasa Web Albums.
- **Embed photos on other sites:** Include a Picasa Web Albums slideshow, album, or image on your blog or website. Just copy a small snippet of HTML and paste it in the source code of your site.
- **Sync your changes:** When you enable **Sync to Web** in Picasa for a folder or album, edits made to your photos in Picasa are reflected immediately in the corresponding album in Picasa Web Albums.
- **Try Creative Commons:** Creative Commons is a licensing feature that allows you to specify whether others can reproduce or share your work.
- **See photos from Blogger, orkut, and Latitude:** Any photos uploaded to your accounts with these Google products are automatically added to your Picasa Web Albums account as well.
- **Check out the Explore page:** The Explore page is an entire page devoted to interesting public photos from all over the world. See 'Feature Photos' that have been hand-picked by our team. Or check out 'Recent Photos' to watch a stream of newly uploaded photos.
- **Buy more storage:** Don't let storage space hamper the number of photos you upload to Picasa Web Albums.
